Signed _____ Chairman, CHDC Date _____

The following is intended to assist the applicant by providing examples of accompanying materials that would facilitate the Commission's evaluation of an application. These are suggestions only and do not represent either a set of requirements nor a comprehensive list of possible materials.

The intent of providing accompanying materials is to provide whatever information in whatever format that would allow a layperson (that is, a person without any formal background in construction, architecture, or design) to visualize the proposed changes upon their completion.

In the case of major construction projects, architectural drawings are usually suitable. Digitized before-and-after photos of the structure as it exists (before) and with superimposed modifications (after) may also be helpful.

For doors, windows, and similar materials, a manufacturer's specification sheet and/or a catalog detail page is ideal. Other information helpful in the assessment of the proposed project might include:

Description, drawing, or photo of existing structure(s)

Description, drawing, or edited photo of proposed changes

Description and/or site plan showing orientation to compass, streets, and/or adjacent structures

Examples: "windows on west side of house facing Main Street"

"walkway from south-facing front door to Front Street curb"

Material of components to be removed/replaced

Material of new/replacement components

Examples: "aluminum-clad solid wood door"

"concrete pavers with bluestone steps"

Dimensions

Examples: "4'h x 2'w window with 1.5" frame"

"5' wide x 100' walkway"

Color, if integral to the material (versus surface color, e.g. paint or stain)

Hardware

Examples: doorknob make & model

fence gate hinges & latch style

Composition

Examples: "6 over 6 true divided light double hung window"

"8' vertical slat solid privacy fence"
